

Inspection Report

Division: Aerospace

Dep: Tubing cell, Pl 4B

Model No.: IRMCO 980 000

Supplier: TecMec Enterprises

Subject: Report on IRMCO 980 000 Lubricant for Tube Bending Operation.

We are pleased to inform you that we conducted a trial of the lubricant you supplied for our tube bending operation. The trial involved using the lubricant on the tubes during the bending process to evaluate its performance and suitability for our requirements.

Upon completion of the trial, we found the lubricant to perform effectively, meeting our expectations in terms of lubrication, ease of application, and overall process efficiency.

The following observations were made during the trial:

- No sound during operation
- Proper viscosity
- Suitable for mandrel and wiper die.

Based on these results, we are satisfied with the product's performance and find it suitable for continued use in our operations. We appreciate your support during this trial process and look forward to collaborating further.

Note: The Lubricant IRMCO 980 080 is not suitable for the operation as concluded after the trials as its viscosity is very less for our operation, and we are moving forward with the IRMCO 980 000 lubricant.
